

Ethan Kelly – Working with Me

INTJ · O-C-E-A-N 70 · 90 · 45 · 80 · 10*

STRENGTHS

Grit. Long hours, Ironmans, Marathons, hard clients, failing systems, absorbed without drama.

PM-Conscious. Constantly evaluating the strategic why, not just executing against it.

Fast on Feet. Real-time thinking under pressure: live debugging, path-finding, staying useful.

Insightful. Fast at identifying the actual problem be that technical, process, or people.

Versatile. Switches between deep execution and strategic thinking without friction.

Communication. Structured, direct, keeps the written record. A technical advantage, not a soft skill.

WATCH-OUTS

Confidence Lull. Strong output can make oversight look unnecessary. It isn't. Multiple eyes matter.

Tunnel Vision. Deep focus narrows perspective. On the critical path, stepping back is necessary overhead.

Going at it Alone. Confident anything is achievable but not necessarily perfect, in time, or of required quality.

Pushing Past the Signal. Takes more pressure than most. If you see it coming first, say so directly.

HOW I'M ADDRESSING MY WATCH-OUTS

Confidence Lull. Scheduled self-check-ins. Weaknesses made explicit to peers.

Tunnel Vision. 30-min step back every 4 hours on deep work to keep the full system in view.

Going Alone. Support scheduled even when it doesn't feel needed, used religiously.

Pushing Past. Mode-switching built into the schedule, not left to willpower.

WHAT I VALUE IN MY PEERS

Direct Communication. Say what's true, clearly, consistently. Directness is a feature, not a risk.

Timely. Let's respect each other's time. Don't be late without warning. Don't waste my time with a BS meeting.

Self-Awareness. Know where you're at and say so. Known constraints get worked around. Unknown ones don't.

Precedent. Honest positioning sets the baseline. A gap surfaced now beats one discovered later.

Clear Roles. What's your role? What are your responsibilities? If you don't have time for them – say so and step out.

HOW TO COLLABORATE

Build in the Challenge. Don't let results talk you out of your process. Strong output makes systematic challenge more important, not less.

Full Process. Contribution is highest from definition through iteration not just execution.

Involve Early. A thought partner, not a ticket-taker. Problem definition first, execution second.

State Priorities. Speed, stability, quality, cost. Say what matters. Early correction beats late discovery.

COMMUNICATION

Perpetually Busy. Assume capacity is limited. Respect it and get respected back.

Be Concise. Lead with the point. Context after. If it can be a message, don't make it a meeting.

Written First. Async almost always beats a meeting. A tight written brief is faster, clearer, and leaves a record.

Focus Time is Real. Off means off. Respect the boundary and it gets respected in return.
